

H2O Multifunction Clock

The new H2O Multifunction Clock from Tango Group is the latest in ecological and environmental design. Incorporating the revolutionary and patented, H2O **water** powered battery, together with innovative use of conventional digital technology, the H2O Multifunction Clock offers the user an environmental design solution for a product that is used in every day life.

This has all been made possible by groundbreaking developments in portable power technology operated by an inexhaustible resource - "**water**". The patented technology utilises two electrodes consisting of specially formulated alloys, one positive, and the other negative. When immersed in **water** an electrochemical reaction takes place resulting in the production of electrical energy.

To maintain a constant supply of energy simply refill as the **water** evaporates, typically every 2 to 3 months. The H2O **water** battery has a minimum continuous life of at least 2 years. In addition to this, the H2O **water** battery (unlike all other conventional batteries) can be stored in its dry state indefinitely and can be left to dry out at any time during its life and its life extended indefinitely.

As all the components of the H2O **water** battery are recyclable, the benefits over traditional batteries are countless. Every year billions of conventional dry cell batteries are used, and the recycling of such waste is not only

expensive but often incomplete, resulting in hazardous pollution and damage to our environment.

The H2O Multifunction Clock is the most unique powered product anywhere in the world today. By just adding **water** you are providing your product with an endless source of energy. At the end of the H2O **water** battery's life (indicated by dimming of the display) simply replace the battery and start all over again.

Replaceable H2O Water Battery

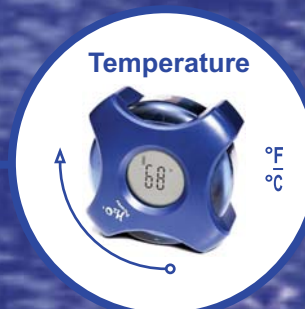

Not only is the H2O Multifunction Clock environmentally friendly, innovative and good-looking, it boasts a range of functions that are

initiated by simply rotating the clock through 90-degree turns.

Dimensions

Product: 95 x 95 x 50 mm 149 grams
Packaging: 109 x 105 x 58 mm 160 grams
 (50 units per shipping carton)

RoHS
